**Re: McAllen Hospitals, L.P.
EPA Docket No. RCRA-06-2015-0939**

Dear Mr. Thrush,

On August 12, 2015, McAllen Hospitals, L.P. ("McAllen Hospitals") and the Environmental Protection Agency ("EPA") entered into a Consent Agreement and Final Order ("CAFO") EPA Docket No. RCRA-06-2015-0939, to address allegations of non-compliance of the Resource Conservation and Recovery Act ("RCRA") at the facility referred to as the "McAllen Heart" facility located at 1900 S.D. Street, McAllen, Texas 78503 ("Facility"). Pursuant to the CAFO, McAllen Hospitals hereby certifies the following regarding the Facility:

- 1) McAllen Hospitals has reviewed all federal and State of Texas environmental requirements that are applicable to it as a generator of hazardous waste for the Facility.
- 2) McAllen Hospitals has developed and implemented a compliance plan that is designed to ensure that the Facility is meeting the regulations applicable to it as a generator, including but not limited to:
 - a) Making hazardous waste determinations;
 - b) Creating and keeping the requisite records;
 - c) Managing hazardous wastes; and
 - d) Reporting and offering for transportation and treatment its hazardous waste.

Enclosed with this Certification at "Attachment A" is a copy of the RCRA compliance plan for the Facility.

- 3) McAllen Hospitals has also accurately complied with its RCRA Section 3010

**POLICY/PROCEDURE: HAZARDOUS MATERIALS & WASTE MANAGEMENT PLAN –
McALLEN HEART HOSPITAL**

DEPARTMENT: System Wide

McAllen Heart Hospital

2015 Hazardous Materials and Waste Management Plan

SCOPE

The Hazardous Material and Waste (HazMat) Management Plan describes the methods for handling hazardous materials and waste through risk assessment and management for McAllen Heart Hospital. The waste streams identified for this facility are:

- Acutely Hazardous Waste (P-waste)
- Hazardous Waste (RCRA)
- Regulated Medical Waste
- Municipal Waste
- Chemotherapeutic Waste
- Laboratory Hazardous Waste
- Radioactive
- Universal Waste (Batteries, light bulbs, etc.)

The plan addresses the risks associated with these materials that can pose a threat to the environment, staff, patients, and visitors from the variety of hazardous substances, such as radiological, chemical, or hazardous energy sources, and to minimize the risk of harm at McAllen Heart Hospital. This program is designed to meet compliance with regulatory agencies such as Resource Conservation Recovery Act (RCRA), Department of Transportation (DOT), Occupational Safety and Health Administration (OSHA), The Joint Commission (TJC) and state and local agencies as applicable. The processes include education, procedures for safe use, storage and disposal, and management of spills or exposures.

The program is applied to all employees, departments and areas of McAllen Heart Hospital.

II. FUNDAMENTALS

- A. McAllen Heart Hospital has been identified as a Large Quantity Generator based upon the self-assessment.

Definitions for Generator Status are:

LARGE QUANTITY GENERATOR

LQGs produce 1,000 kg or more of hazardous waste per calendar month, or more than 1 kg of acutely hazardous waste (i.e., waste codes denoted with the hazard code "H" and all P-listed wastes). Wastes from these generators are subject to full regulation in Part 262.

SMALL QUANTITY GENERATOR

SQGs produce between 100 and 1,000 kg of hazardous waste per calendar month and are subject to modified regulations found in Part 262. Generally, SQGs must comply with some but not all of the regulations that apply to LQGs. Simplified requirements are specified for SQGs in place of some LQG requirements.

CONDITIONALLY EXEMPT SMALL QUANTITY GENERATOR

CESQGs produce 100 kg or less of hazardous waste per calendar month. In addition, generators who produce 1 kg or less of acutely hazardous waste, or 100 kg or less of contaminated soil, waste, or debris resulting from the cleanup of an acute hazardous waste spill, are CESQGs. CESQGs are exempt from Parts 262 through 270 if they comply with the requirements in §261.5.

- B. The hazardous materials and waste are identified in the organization's inventory and the associated hazards defined as required by law or regulation in Safety Data Sheets (SDS), guidelines, good-practice recommendations, or similar available documents.
- C. Safe use of hazardous materials and handling of waste requires participation by leadership, at an organizational level and a departmental level, and other appropriate staff in the design and implementation of all parts of the plan.
- D. Protection from hazards requires all staff that use or are exposed to hazardous materials and waste to be educated as to the nature of the hazards and to use equipment provided for safe use and handling when working with or around hazardous materials and waste.
- E. Rapid, effective response is required in the event of a spill, release, or exposure to a hazardous materials or waste.
- F. Special monitoring processes or systems may be required to manage certain hazardous gases, vapors, or radiation undetectable by humans.
- G. Segregation of hazardous waste at the point of generation is an effective means of controlling the potential for exposures or spills during collection, transport, storage and disposal.
- H. Tracking materials from cradle to grave insures proper handling of hazardous materials and waste. The hospital receives waste manifests during pick up and destruction certificates are received and matched up with manifest within 45 days for LQG days of pick up.

III. OBJECTIVES

The Objectives for the Hazmat Program are developed from information gathered during routine and special risk assessment activities, annual evaluation of the previous year's program activities, performance measures, ICES Reports and environmental tours. The Objectives for this Plan are:

- Hazardous Waste Storage weekly monitoring
- Evaluate the need for eye wash stations and showers

IV. ORGANIZATION & RESPONSIBILITY

- A. The Governing Board receives regular reports of the activities of the HazMat Program from the Environment of Care Committee which is responsible for the physical environment issues. They review reports and, as appropriate, communicate concerns about identified issues and regulatory compliance. They also provide financial administrative support to facilitate the ongoing activities of the HazMat Program.
- B. Senior leadership, or other designated leader, collaborates with the EOC Committee Chairperson to establish operating, and capital budgets for the HazMat Program, as required.
- C. The Hazardous Material Coordinator in collaboration with the Environment of Care Committee is responsible for monitoring all aspects of the HazMat Program. This individual advises the Environment of Care Committee regarding HazMat issues which may necessitate changes to policies and procedures, orientation, education, or expenditure of funds.
- D. Department directors are responsible for orienting new staff members to the department and, as appropriate, to job and task specific HazMat procedures to include location and access to department specific SDS. They are also responsible for the investigation of incidents occurring in their departments. When necessary, the Hazardous Material Coordinator provides department directors with assistance in developing department HazMat programs or policies.
- E. Individual staff members are responsible for learning and following job and task-specific procedures for HazMat operations. They are also responsible for immediately reporting any potential hazardous materials concerns and or issues.

V. PERFORMANCE ACTIVITIES

The performance measurement process is one part of the evaluation of the effectiveness of the HazMat program. Performance measures have been established to measure at least one important aspects of the HazMat program.

The performance measures for the HazMat program are:

- Decrease number of pounds of regulated medical waste by 2% annually
- Staff knowledge of proper cylinder storage (Threshold 90%)

VI. PROCESSES FOR MANAGING THE RISK OF HAZARDOUS MATERIAL AND WASTE

Hazardous Materials and Waste Inventory

The organization develops and maintains an inventory of hazardous materials and waste, including biological, acutely hazardous (P-waste), hazardous (RCRA), radiological, chemotherapeutic, and chemicals. Each director provides information on the hazardous materials and waste *used, stored, or generated* in that department. The Hazardous Waste Coordinator manages the inventories received from each department and evaluates for completeness with assistance from the appropriate staff, including the Radiation Safety Officer.

Information identifying the hazards and emergency responses associated with these materials and wastes are available to staff, patients, and visitor at all times from such resources as Safety Data Sheets (SDS) sheets, Centers for Disease Control (CDC) Guidelines, and Nuclear Regulatory Commission (NRC) regulations. Various methods for retrieving the information are available from the internet, fax, and/or on-line servers. To insure availability at all times, a hard copy of the SDS associated with the material is located in Emergency Department.

Spills and Exposures

The Hazardous Waste Coordinator develops and maintains emergency procedures for the Hazardous Materials and Waste program. These procedures include Hazardous Materials and Waste Plan, Emergency Spill Response Plan, and Contingency.

Procedures have been developed that evaluate spills to determine if outside assistance is necessary. A minor (incidental) spill is one that can be cleaned up by the staff involved, with their training and personal equipment. If a spill kit is used, replace the kit contents. Personnel can contact Environmental Services, Lab and Plant Operations for additional minor spill response.

All minor spills should be cleaned up in accordance with applicable regulatory requirements. For example, a minor spill of RCRA hazardous waste should follow the proper handling, segregation, and management required for RCRA wastes, including clean-up materials and personal protective equipment (PPE) that may have become contaminated with the RCRA waste during the clean-up.

A spill that exceeds the capability of the departmental staff to neutralize and clean up should be reported to Extension 455. PBX will announce "Code Orange" overhead. The spill response team composed of Environmental Services, Engineering, Security and Laboratory will respond to the location with a spill kit. Spill kits are located in the

VIII. Management of Hazardous Materials and Waste Storage Space

The (Safety Officer or designee) assesses the appropriateness of space for handling and storage of hazardous materials and waste as part of the environmental tour program. The

PUBLIC VERSION

intent of evaluating these issues during environmental tours is to determine if current conditions and practices support safe handling and storage of hazardous materials and waste, and separation of the hazardous waste from clean and sterile goods and foods.

Department Directors are responsible for initiating corrective actions on findings related to the appropriate use of handling and storage spaces in their areas of responsibility.

IX. Documentation of Permits, Licenses, Manifests and SDS

Permits and licenses have been obtained for the handling and or disposal of hazardous wastes, including chemical wastes, regulated medical waste, pharmaceutical (including RCRA) and radioactive materials from the appropriate federal, state, and municipal agencies. McAllen Heart Hospital has submitted a Notice of Registration to the Texas Commission on Environmental Quality (TCEQ) as a non-industrial generator of Industrial and Hazardous Waste. Generator status is determined each year based on total amount of hazardous and acutely hazardous waste, as defined by the EPA, and reported in the Annual Summary to TCEQ.

Manifests

Each load of hazardous waste removed from the facility is documented by a manifest, as mandated by federal or state agencies. The manifests have multiple copies, and a copy is left in EVS at the time the hazardous waste is removed. Another copy travels with the waste, and is returned to the hospital once the wastes have been legally disposed of, to document the completion of the activity. These copies are matched to assure that the waste codes and total weight quantity is accurate. These records need to be maintained for a minimum of three (3) years. If a completed copy of the manifest is not returned within the deadline established by law and regulation (LQG 45 days), the Engineering Director notifies the appropriate governmental agency and the information is also shared with the EOC Committee.

X. Process for Labeling Hazardous Material & Waste

All hazardous materials and wastes are properly labeled for receipt or generation until disposal in accordance with regulatory compliance. Storage location signage meets regulatory compliance.

- **Regulated Medical Waste:** These are placed in red bags, and then placed into cardboard boxes, or plastic bins with external labeling as bio-hazardous wastes, or in a labeled roll-away container provided by the vendor, also labeled with the OSHA Bio-hazardous labeling and DOT required place-carding. The red bags are deemed to be labeled, as these bags are not used for any other purpose, and any material in a red bag is treated as bio-hazardous.
- **Chemotherapeutic Waste:** Chemotherapeutic waste is placed into labeled containers (labeled with the OSHA and international symbol for carcinogenic wastes). These wastes are handled along with the red bag wastes. Bulk quantities of chemotherapeutic waste are handled as hazardous chemical waste.

- **Acutely Hazardous Waste (P-Waste):** Acute Hazardous Waste labels identify the products placed in the small black containers and a date as to when the products were collected. Labels utilized for this purpose will comply with all regulatory requirements. These products will not be stored more than 90 days.
- **Hazardous P-Waste:** Non-acute P-Waste will be placed in the large black containers and dated as to when the waste were collected. Labels utilized for this purpose will comply with all regulatory requirements. These products will not be stored more than 90 days.
- **Chemical Materials & Waste:** Chemical materials are labeled throughout their use, handling, and disposal. The label is on the container prior to receipt or is placed on containers when filled or mixed within the hospital. Labeling is evaluated during environmental tours, to assure the labels are maintained and legible. In many cases the waste is labeled by the original chemical name. In other cases, where collection cans or containers are used, the container is labeled. These labels are required by the vendors of chemical disposal services to maintain the identity of the materials, and if the identity is lost, the materials are tested and analyzed to identify them for proper handling and disposal.
- **Radioactive Materials & Waste:** Radioactive materials and wastes are labeled according to NRC, OSHA, or International agencies. Wastes are held to decay to background, when the labels are removed or covered, and wastes handled as the other hazards they may reflect. Labeling is evaluated during environmental tours, to assure the labels are maintained and legible.
- **Hazardous Energy Sources:** Hazardous energy sources are labeled in accordance to OSHA, NRC and other appropriate agencies. Warning alarms are also installed to identify the risk or radiation when these sources are energized.

XI. Orientation, Training, and Education

All staff must attend new employee orientation within 30 days of hire. New employee orientation addresses key issues and objectives of all seven areas of the Environment of Care (EC) to include Hazardous Materials and Waste program. This orientation includes the role each area and staff play in the overall patient safety program.

Employees also receive departmental safety orientation at their respective work areas regarding hazards and their responsibilities to patients, visitors, and co-workers. In addition, all staff participates in periodic refresher training relative to the EC.

Staff who have additional job tasks with direct handling, disposal, storage and recordkeeping regarding Hazardous Materials and Waste may be assigned additional training such as DOT, RCRA and etc.

XII. Evaluating the Management Plan

On an annual basis, the Hazardous Material Coordinator evaluates the scope, objectives,

PUBLIC VERSION

performance, and effectiveness of the Plan to manage the risks of hazardous materials and waste to the staff, visitors, and patients at McAllen Heart Hospital. The annual evaluation will be reported to the Environment of Care Committee, Medical Executive Committee and Governing Board.

**McAllen Medical Heart Hospital
RCRA Pharmaceutical Waste Management Guidance Document
Rev. August 2015**

1. Introduction

This document provides guidance on the identification and characterization of pharmaceutical wastes that are hazardous wastes under the Resource Conservation Recovery Act (“RCRA”) at the McAllen Medical Heart Hospital (“McAllen Heart Hospital”). As discussed in the overview below, pharmaceutical hazardous wastes represent one type of hazardous wastes that a healthcare facility may generate.

Pharmaceutical hazardous waste identification is part of an overall pharmaceutical hazardous waste management program that includes multiple steps:

- Identifying drugs that must be managed as hazardous waste;
- Labeling drugs to facilitate segregation of hazardous waste;
- Segregating waste streams;
- Training staff;
- Managing spills;
- Setting up and managing satellite accumulation and storage accumulation areas;
- Preparing and maintaining hazardous waste manifests;
- Determining hazardous waste generation status; and
- Managing wastes in accordance with the facility’s generator status.

This document provides guidance on the recommended steps for identification of pharmaceutical hazardous wastes. Complete and proper identification of pharmaceutical waste provides the foundation for a sound waste segregation program.

2. Overview of Hazardous Waste Identification and Generator Status

The first step to a successful and compliant hazardous waste management program at a facility is the correct identification of all hazardous wastes generated by the facility.

The amount of acute and non-acute hazardous wastes generated determines the

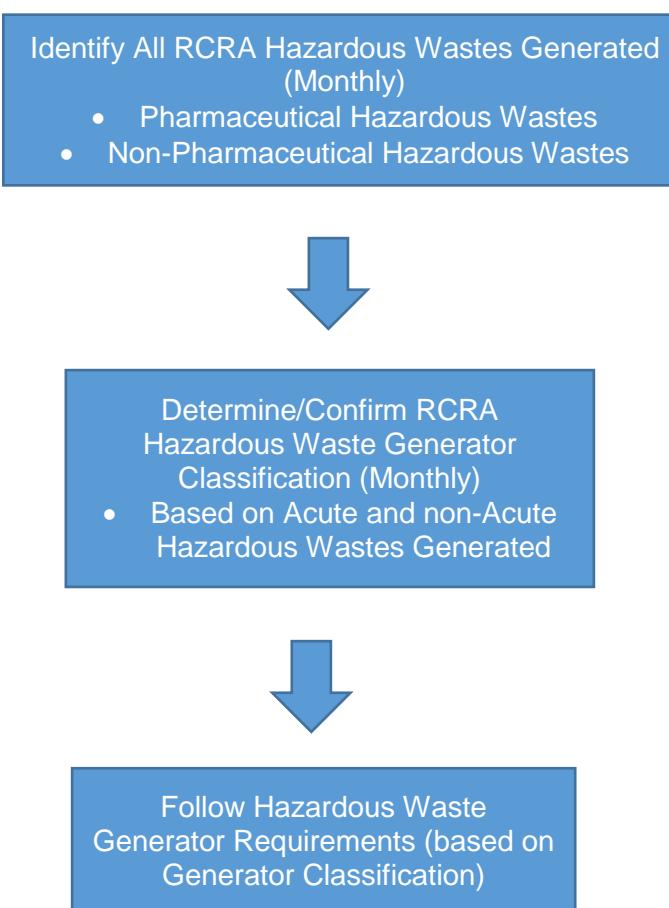

PUBLIC VERSION

facility's generator status, and the generator status determines the specific generator requirements the facility will need to follow related to the hazardous waste it generates.

A facility must properly characterize each of its hazardous waste streams, evaluate if/how such waste is mixed with other waste types and determine how much hazardous waste is generated on a monthly basis, in order to determine the level of management that must be met.

While this document provides guidance only on pharmaceutical hazardous wastes, it is important to note that when determining the facility's monthly generator status, the facility must include all of its hazardous wastes generated during the month including: 1) hazardous waste from medical and diagnostic tests and services (e.g., xylene, methanol, etc.); 2) hazardous waste from histology, cytology, pathology, and chemistry; 3) hazardous waste from building maintenance; 4) pharmaceutical hazardous wastes; and 5) any other hazardous wastes generated by the facility.

The facility must maintain sufficient documentation to verify its generator status on a month-to-month basis, and thus the specific hazardous waste management standards a facility must meet when managing the hazardous waste generated.

### **3. Overview of Pharmaceutical Hazardous Waste Identification (“HWID”)**

Healthcare facilities that generate pharmaceutical wastes (also called “drug wastes”) classified as hazardous waste must manage these wastes in accordance with the RCRA Subtitle C hazardous waste generator requirements.

Drug waste consists of many distinct waste streams reflecting the complex and diverse nature of chemicals that make up pharmaceuticals. These wastes can be generated from multiple activities that occur in a healthcare facility including, but not limited to drug compounding, intravenous (“IV”) preparations, spills or breakage, partially used vials, syringes, and IVs, discontinued or unused preparations, unused unit dose repacks, patients’ personal medications and outdated pharmaceuticals.

A first step to a successful and compliant pharmaceutical hazardous waste management program is the correct identification of all pharmaceutical hazardous wastes generated by the facility. This classification forms the basis for a facility’s pharmaceutical hazardous waste stream segregation procedures.

Pharmaceutical hazardous wastes fall under one of two potential RCRA hazardous waste categories: (1) listed hazardous wastes (i.e., wastes that appear on one of federal lists of hazardous waste (refer to 40 C.F.R. §§ 261.31 - 261.33); or (2) characteristic wastes that do not otherwise qualify for an exclusion.

The remainder of this section provides an overview of conducting a pharmaceutical drug inventory review, which includes identifying pharmaceutical products and formulations that may need to be managed as hazardous wastes under RCRA.

### **4. Conducting a Pharmaceutical / Drug Product Inventory Review**

RCRA places the burden of proof for making a hazardous waste determination on the generator. Therefore, as the generator, the facility is responsible for identifying the drugs administered at the facility that must be managed as hazardous waste, when generated as waste.

A drug inventory review should include the following steps:

- 1) Obtaining drug specific data from the drug wholesalers, brand name, generic name, manufacturer, strength, dosage form, package size;
- 2) Identifying all ingredients in each drug product (this includes all of the ingredients found in each drug formulation, including preservatives, heavy metals, and alcohol); and
- 3) Determining the appropriate RCRA Hazardous Waste Code.

The inventory review may also involve making certain best management determinations.

In addition to the pharmaceutical products it dispenses, during the drug inventory review, the facility must also consider all compounded items, re-formulations and IV and mixtures it will generate, to determine the hazardous waste designation of these. It is particularly important to note that the characteristic waste designation for the reformulation or IV admixture may not be the same as for the original formulation. For example, a pharmaceutical could exhibit the characteristic of ignitability when purchased for the pharmacy but after compounding or prepared for patient dispensing, it might no longer exhibit the ignitable characteristic. The reverse situation also can also occur.

As the generator, the facility should maintain documentation for calculations, waste stream and waste code determinations, used to determine whether certain waste drugs need to be managed as hazardous wastes, and which waste codes. The outcome of the review is a drug inventory of RCRA pharmaceutical products and appropriate RCRA hazardous waste code(s). The facility must keep its RCRA drug inventory list current (i.e. to add new drugs as needed).

The remainder of this section provides an overview of the drug inventory review process.

#### **4.1. Identifying Drug Products that are Included on RCRA Hazardous Waste Lists**

By definition, EPA determined that certain specific wastes are hazardous. These wastes are incorporated into lists published by EPA, which are organized into three categories:

- 1) The F-list (non-specific source wastes) (40 C.F.R. § 261.31);
- 2) The K-list (source-specific wastes) (40 C.F.R. § 261.32);
- 3) The P-list and the U-list (discarded commercial chemical products) (40 C.F.R. § 261.33).

Pharmaceutical wastes are found on two of the four RCRA lists of hazardous wastes – the P- and U- lists (40 C.F.R. § 261.33).

The P- and U-lists are similar in that both list as hazardous certain commercial chemical products when they are discarded or intended to be discarded. These listings consist of commercial chemical products having the generic names listed, off-specification species, container residues, and spill residues.

The difference is that the chemicals on the P-list are identified as acute hazardous wastes and those on the U-list are identified as toxic wastes. Some chemicals on both lists may also be designated to have other properties.

**4.1.1. Identifying Pharmaceuticals on RCRA's P-list**
